(54) TONNEAU COVER FOR AUTOMOBILE

(57) Abstract:

PROBLEM TO BE SOLVED: To efficiently load a lot of small articles and large luggage at a simple operation by dividing a tonneau cover body into a plurality of number in the front/rear direction and by vertically installing a first tonneau cover and a second tonneau cover in a luggage room into a plurality of number.

SOLUTION: For example, a tonneau cover body 4 is divided into two in the front/rear direction so as to be formed into a first tonneau cover 41 and a second tonneau cover 42. When loading a luggage room 3 with small articles for example, at first, the circumference of the connecting part between the first and the second tonneau covers 41, 42 is lifted from the horizontal state of the tonneau cover body 4 so as to rotationally move the rear end. A lock recess 4f formed in the rear of the second tonneau cover 42 is engaged with a hook type lock projection 3h projected from a front panel 3a. Then, the front end and the rear end of the second tonneau cover 42 are held in approximately horizontal states by the lock projection 3h and the erected link 6a respectively so that the first and the second tonneau

cover 41, 42 are vertically arranged into two stages and can store the a lot of small articles.
